CROP VALUES

Season Average Prices and Value of Production, by States, 1961 and 1962

Estimated season average prices and value of production for all major farm crops and for many minor crops are presented in this report. The season average prices shown in this report are estimates of the average price received by producers for that part of the crop that is sold. Price estimates for the 1962 crop are based on sales through November with an allowance for marketings for the remainder of the season. These prices are applied to the production estimates presented in Crop Production--1962 Annual Summary to compute the value of production for each State. The United States value of production is the sum of the State values. In this report the U.S. average prices are obtained by weighting State prices by estimated State sales for each crop year. These averages may differ from the averages computed by dividing value of production by the quantity produced. Velvetbeans and sorghum forage are exceptions to the above general rule as very little of these crops are sold and accordingly the U.S. averages are derived by weighting State prices by quantity produced. The value of production estimates in this report relate to the crop year and should not be confused with cash receipts which relate to sales during a calendar year, irrespective of the year of production. All estimates for the 1962 crop are preliminary. Although most 1961 crop prices have been revised, they are subject to further revision. Final prices for 1961 crops will be published in the May 1963 Field and Seed Crops report.

For crops where monthly price estimates are prepared State season average prices are computed by weighting mid-month prices by estimated monthly marketings. For most other crops the season average price is based on special survey data. The season average prices for corn, wheat, rye, rice, oats, barley, sorghum grain, flaxseed, soybeans, dry beans, cotton lint, and cottonseed include an allowance for unredeemed loans and purchase agreement deliveries valued at the average loan rate, by States. The 1962 price for cotton is the average price to December 1. For dry beans and dry peas the price and value estimates relate only to production of cleaned beans or peas

Summary of crop values, United States*, 1961 and 1962

Total 78 crops <u>11/</u>			--- 19,742,284		--- 20,107,281

* Does not include Alaska and Hawaii

1/ United States average prices computed by weighting State prices by estimated sales except for velvetbeans and sorghum for forage, (see text).

2/ Not included in the total value for 78 crops shown at the end of the table.

3/ Ear corn.

4/ Price to December 1.

5/ Price of hay sold baled.

6/ Does not include Government payments under the Sugar Act. 1962 is based on average marketing prices to December 11.

7/ Equivalent packinghouse-door returns for all uses for citrus and for apples and for pears in Pacific Coast States.

8/ Not available.

9/ Used 1961 price to evaluate production, except California grapes and figs not dried.

10/ Includes some processing.

11/ Excludes crop indicated with footnote 2.

1/ Sufficient sales data were available to estimate a season average price for most of the States 1962 production but 1961 season average prices were used for some types in evaluating production and calculating an average price for all tobacco. 2/ Season average prices for 1962 crop sales were used if sufficient sales data were available, but most or all of the 1962 crop was evaluated using 1961 crop season average prices.

1/Estimates for each State cover all potatoes, including winter, early & late spring, early & late summer and fall crops where shown. The value of production for all potatoes is the sum of the value of production of the seasonal groups. For States having two or more seasonal groups the State average price is derived by dividing value of sales by total sales and may not give the same average as dividing total value of production by total production. 2/ Some quantities not harvested or not marketed because of low prices are included in the production estimate but excluded in computing value.

1/ Estimates for the commercial crop relate to apples produced in the commercial apple areas of each State. Price and value apply only to that portion of the crop utilized.

2/ The season average price is the equivalent packinghouse-door returns for Pacific Coast States, and the price as sold for other States.
